SBIRT Clinical Training

What is SBIRT?

SBIRT (Screening, Brief Intervention, and Referral to Treatment) is a comprehensive, integrated, public health approach to the delivery of early intervention and treatment services for persons with substance use disorders, as well as those who are at risk of developing these disorders.

Training Objectives:

- Define SBIRT
- List the components of SBIRT
- Name SBIRT tools and define how they may be used during an assessment
- Identify billing methods for your state

Who is the training for?

Peach State Health Plan Primary Care Network Providers and Administrators

How long is the training?

2 hours or less

Benefits of SBIRT

- Quick
- Targeted
- Comprehensive
- Universal
- Integrated
- Evidence supports the model

The initial screening can be accomplished in about 5 - 10 minutes and all Peach State Health Plan members that present specific behaviors are screened as part of the standard medical evaluation process. This screening tool addresses specific problematic behaviors that are or are not preconditioned to substance abuse or dependency. Also, the services occur in a PCP (Primary Care Physician) setting and includes a seamless transition between brief universal screening, brief intervention (BI) and/or brief treatment (BT), and referral to specialty SUD care.

How do I get this training?

We are able to provide this training in person or via a webinar. Contact our clinical provider trainers:
